

# CommandView for SAP WM/EWM

## Mobile Command and Control Center

Operational analytics platform for modern warehouses and distribution centers

### CommandView brings your SAP warehouse into the future with:

- Usable intelligence to help front-line managers run their warehouses more efficiently
- AdvancedIQ AI technology provides real-time alerts to support decisions that impact efficiencies.
- Actionable insights to help managers work smarter, better and faster

# Mobilize. Automate. Optimize.

Give front-line managers the tools they need to make good labor, receiving, packing, picking, and shipping decisions. CommandView's operational analytics help managers:

- Make critical labor reallocation decisions on the fly
- Expedite orders based on priority and manage seasonal fluctuations
- Manage high-velocity e-commerce and omni-channel orders
- Predict and prepare for customer demand before it happens

## Integrating directly with SAP WM/EWM, CommandView provides visibility into:

- Wave statuses
- Deliveries
- Month-to-month comparisons
- Resource allocation
- Orders flowing through pack stations
- Shipments awaiting carriers
- Facility KPI scorecards  
(dock-to-stock, picks-per-hour, etc.)

Operational analytics help you run an efficient supply chain.

Maximize capabilities by integrating CommandView with other Advanced Solutions products. For example, used with AdvanceShip, CommandView delivers high levels of visibility into each pack station. Used with AdvancedCount, CommandView provides expanded views of cycle counting and related inventory management activities.

### About Advanced Solutions

Founded in 1999 and based in Chicago, Advanced Solutions helps companies across all industries optimize their SAP supply chain solutions. Our support and solutions are backed by an experienced and responsive team that helps your operations run smoothly. Scan the QR code for a direct link to additional product information.
